January 31, 2018
Moscow

Mosenergo has grown electricity output from new units for 2.6% in 2017.

Mosenergo has stated its operational results for 2017.

Thermal power plants of the Company produced 57.86 bln kWh of electricity – 2% less than at the same period of 2016 (59.07 bln kWh) due to increasing electricity floats to Moscow energy system from interconnected energy systems. Despite that, electricity output from Mosenergo CSA units has grown for 2,6% up to 16.48 bln kWh.

Heat output from collectors (including local and district boilers) decreased for 2.9% to 79.45 mln Gcal (compare 81.83 mln Gcal in 2016) due to higher average outside temperature in 4th quarter of 2017 than at the same period of 2016.
